my talk: a nice talk

December 11, 2015

A chapter

my talk: a nice talk

slides

 $\ensuremath{\mbox{{\tt present-tex}}}$ converts a .slide presentation to a LaTeX/Beamer presentation.

Here are some bullets:

- correctly rendered
- but not numbered

slides

Consider this simple package github.com/me/hello:

slides

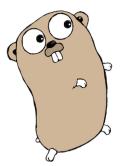

present-tex has some limited supported for .play:
package main

import (
 "fmt"
)

func main() {
 fmt.Printf("hello world\n")
}

slides

Images are supported, such as this lovely PNG gopher:

or that lovely gopher:

present-tex should be able to correctly handle URLs like so. But, also, **bold** text and text in *italics*. Special LaTeX characters, such as &{}\\$\^-\#, are also correctly handled. github.com/sbinet/present-tex Snippets of code look like so:

\$> ls /my/dir
\$> exit

github.com/sbinet/present-tex is still a work in progress.

The END.
